

Emanuel Galindo Garcia

Boston, MA | github.com/emanuel8006 | www.linkedin.com/in/emanuel-galindo-garcia | Availability: January - June 2027

EDUCATION

Northeastern University, Boston, MA

Candidate for Bachelor of Science in Computer Science and Mathematics

May 2029

Honors: John Martinson Honors Program, GPA: 3.72/4.00

Relevant Coursework: Algorithms, Object-Oriented Design, Intro to Databases, Computer Systems, Linear Algebra, Matrix Methods for Data Analysis and Machine Learning, Projects in Cloud Computing (AWS)

Activities: Association of Latino Professionals for America, ColorStack, Oasis, Northeastern Electric Racing

Brewster High School, Brewster, NY

June 2025

Honors: Ranked 5th out of 277 in 2025 graduating class, College Board National Hispanic Recognition

Activities: FIRST Robotics Software Co-Lead, Math Honor Society Secretary

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, Lean, C

Libraries: FastAPI, Pandas, NumPy, Matplotlib, Streamlit, Flask, curl_cffi, Extract Transform Load (ETL)

Developer Tools: Git, GitHub, Visual Studio Code, Supabase, IntelliJ IDEA, DataGrip, MySQL, PostgreSQL

WORK EXPERIENCE

Engineer Intern, VistaLab Technologies, Patterson, NY

June 2025 – Aug. 2025

- Verified zero air-tank leaks across over 25 units through systematic pressure testing per QC protocol.
- Diagnosed 4 defective PCB boards via Realterm serial capture, catching display faults before assembly.
- Authored 3 formal technical test reports on benchmarking device performance and reliability for lab instrumentation, following professional engineering documentation standards.
- Machined 50 precision orifices on a lathe and helped develop a faster deburring method, improving process efficiency for the team.

PROJECT EXPERIENCE

Sprouted, *Tech. Stack: Python, MySQL, Streamlit, Flask, Docker*

April 2026

- Built a 5-module Streamlit dashboard supporting 5 distinct user roles for a community garden management platform.
- Designed the schema and relations for the garden admin role within the platform's 5-role MySQL database.
- Integrated the Streamlit frontend to a Flask REST API with role-based navigation for permission-aware access across all personas.

SwipeWise, *Tech. Stack: Python, FastAPI, React, Vite, Supabase, PostgreSQL*

March 2026

- Built a full-stack swipe-spending tracker and dining app for Northeastern University students, recommending cost-saving meal plans based on individual usage.
- Built a Python pipeline to fetch and parse DineOnCampus API data, powering real-time dining hall menus.
- Cut redundant external calls by engineering a two-layer TTL caching layer over the DineOnCampus API.
- Resolved cross-device 403 errors via curl_cffi browser impersonation, restoring reliable API access.
- Organized the FastAPI backend into services, routers, and models layers with CORS middleware, improving code maintainability and enabling seamless frontend-backend integration.

Project Prometheus, *Tech. Stack: React, JavaScript, Supabase, PostgreSQL, AWS Lambda*

Feb. 2026

- Engineered a full-stack stock simulation platform where users compete on leaderboards by tracking virtual portfolios against real market data.
- Designed a PostgreSQL relational database for users, portfolios, and leaderboards, enabling persistent multi-user state.
- Developed a secure user authentication system via Supabase Auth, implementing custom React modals and protected frontend routing.
- Awarded "Best Beginner" project at HackBeanpot 2026 among 20+ teams.
